Professional summary

Senior frontend developer with full-stack experience across web, mobile, and SaaS products. Experienced with React, Next.js, TypeScript, React Native, and .NET C# backends. Worked on a corporate travel and expense platform used by more than 500 companies. Independently developed five complete products, four with recorded commercial results, owning frontend, backend, and integrations.

Technical skills

Frontend & mobile: React, Next.js, TypeScript, JavaScript, React Native, Design Systems.
Backend & data: .NET / C#, Node.js, REST APIs, PostgreSQL, SQL Server, webhooks.
AI & integrations: LLMs, OCR, Google Vision, OpenAI API, payments, SignalR.
Delivery: AWS, Azure, CI/CD, observability, frontend architecture.

Professional experience

Frontend Developer | Linestur / Lines360

February 2024 – October 2026 | Employment ended October 13, 2026

• Owned web and mobile frontend development for a corporate travel and expense platform using React, TypeScript, and React Native.

• Built and evolved a design system and critical modules, including interfaces, integrations, and real-time features with SignalR.

• Developed .NET C# APIs and OCR/AI automations, including a Google Vision workflow processing 6,000 receipts per month.

• Contributed to architecture decisions, code reviews, monitoring, incident response, and production stability.

Junior Software Engineer | Linestur / Lines360

June 2022 – February 2024

• Developed full-stack features with React and .NET C# for flights, hotels, car rentals, and expense management.

• Implemented APIs, authentication, business rules, and integrations with SQL Server and PostgreSQL.

• Improved interfaces with a focus on accessibility, maintainability, and external service integrations.

Education

Software Engineering | UNOPAR
Undergraduate degree in progress

Selected projects

Sole developer of all five products, from frontend to backend and integrations. Commercial figures are as of October 21, 2026; each project has its own reporting period and methodology.

Dropboox

Platform centralizing suppliers, products, listings, and orders for e-commerce operations. Built the frontend, backend, integrations, and payment webhooks.

BRL 16,643.00 in gross revenue across 59 approved purchases.

Payment webhook records from October 8–21, 2026, during the launch month. This is a partial month; purchases do not necessarily represent unique customers.

HelixQ

Platform and portal for a business serving therapists. Developed the entire frontend, backend, and integrations.

BRL 250,562.02 in cumulative confirmed payments recorded in the system.

BRL 211,609.02 via AbacatePay and BRL 38,953.00 in manual entries. Excludes pending and expired payments; before fees. Historical payment volume, not an available withdrawal balance.

Vexus AI

AI product-image platform with avatars, scenes, and prompts for external video tools. Developed the entire product.

BRL 71,642.71 in gross revenue across 267 purchases.

19 refunded purchases totaling BRL 5,100.26. After refunds: BRL 66,542.45 across 248 purchases, before gateway fees, commissions, and platform costs.

Aivaro

Platform for TikTok Shop affiliates with product curation, AI-avatar images, and scripts. Built the complete frontend and backend.

BRL 180,077.00 in approved payments across 768 transactions.

Applyfy: BRL 178,304.00; PerfectPay: BRL 1,038.00; AbacatePay: BRL 735.00. Before fees and taxes; excludes 30 pending payments. Unrecorded refunds may reduce the total.

RavorAI

Studio for AI product images, reference organization, and prompt and shot preparation for Google Flow. Built the entire frontend and backend.

Product launching; presented as a technical case study.

No purchases recorded in the reported period. Video generation takes place in an external tool.

Figures describe recorded business activity and do not represent profit or the developer’s personal revenue.
